

FABIO BIFFI

SOFTWARE ENGINEER

ABOUT ME

I'm a dedicated **Full Stack Software Engineer** based in **Switzerland**.

My career that began by building websites for local businesses and developed into a 360° passion for web development, from coding to **design**, **SEO**, and **DevOps**. My early interest in coding, including creating a video game in school, laid the foundation for my ongoing journey in tech.

I view **AI as a valuable tool** for accelerating workflows, refining code, and consistently applying best practices, rather than a threat. Looking forward, I see developers increasingly focusing on **design** and **innovation**, leveraging AI to enhance productivity.

As I look ahead, my goal is to advance as a developer and take on greater **responsibility** by growing into a **Tech Lead role**, and eventually transitioning into a **management** position. I am drawn to roles that involve accountability and **leadership**, where I can guide teams, shape technical strategies, and make a positive impact on projects and organizational goals.

WORK EXPERIENCE

CAMARASOFT S.A.

FULL STACK ENGINEER

June 2022 - now

I'm working at **Camarasoft** as a **Full Stack Engineer**.

I am responsible for developing new features for the company's flagship product, a high-traffic classifieds website with over **1 million** unique visitors per day. My role involves implementing core application functionalities, with a strong focus on online payment systems. I work with modern technologies, including **Python**, **Django**, **FastAPI**, **Vue3**, **Docker**, and more.

- Optimized code for **desktop** and **mobile** with high performance and low resource usage
- Global team collaboration using **Agile** (Scrum).
- **DevOps** operations with cloud tools (Nomad, Docker, AWS).
- **Scalable** and **covered by tests** code.

INSPIRING SOFTWARE S.R.L.

FULL STACK ENGINEER

September 2019 - June 2022

I worked at **Inspiring Software** as a **Full Stack Engineer**.

Initially, my focus was on **frontend** development, I have built the company's platform, which is sold to clients.

- **Monorepo** project in **Angular**
- **Micro frontend** development
- Developed modules for **AI-driven** machinery failure prediction, human resource management, physical **asset management**, and more

Later, I transitioned to **backend** development of the same platform.

- Python **Django** framework and DjangoRestFramework for **REST APIs**.
- Tested code with **Unit tests** and **Integration tests**.
